

### Cairns Cityport Masterplan, QLD

For this project Tract worked in conjunction with Cox Rayner architects to produce the landscape and urban works component for the Cairns Cityport Masterplan.

The design involved pedestrian and visual linkages, soft landscape works, commenting on building layout and footprints and general external works materials.

This site makes up a large part of the CBD and it is also the main sector of the area that directly abuts water. Proposed land uses include commercial, residential and international cruise port facility.
